

B&S Heavy-Duty Creep Feeders are built for real cattle operations and designed to hold up to years of hard ranch use. Available in 48" and 60" models, these feeders hold 500–750 lbs of feed and have been tested and proven in the field. The sled-style base is thicker and heavier than most feeders on the market, allowing the unit to be easily moved while still staying stable in pasture conditions.

Each feeder features adjustable creep openings, with the most common setup being 16" wide and 30" tall, along with an adjustable bar that can be raised up to 42" to control calf access as they grow. The easy-open lid with stop holder makes filling simple while keeping the lid secure during use.

A fully covered top design helps protect feed, creating a more waterproof, tight system that keeps feed dry and reduces waste. These feeders are fully welded heavy-duty steel construction, built tough to last and handle everyday farm use.

We offer multiple sizes and height options that allow these feeders to work well for goats, sheep, and calves, making them a versatile feeding solution for a variety of livestock operations.

Paint options are available, and we keep common farm colors in stock so equipment can match the rest of your operation.

Call or message for a quote on double-sided feeders or custom setups.
