

B&S Heavy-Duty Creep Feeder Panels

Our creep feeder panels are designed to allow calves access to supplemental feed and pasture while keeping larger cattle out, helping increase weight gain and overall herd performance. Built for durability and long service life, these 5-foot-tall panels are constructed from 1-5/8" heavy-wall pipe or 2-3/8" drill pipe, providing strength far beyond most store-bought options. Each panel features four or six 16-inch calf openings with an adjustable horizontal bar that allows you to fine-tune access as calves grow.

All panels are fully welded, capped for safety, for extra charge coated with corrosion-resistant paint to withstand years of outdoor use. Our free-standing creep panels are designed for quick setup and portability, making them ideal for rotating pastures or seasonal feeding areas.

For producers looking for a complete setup, panels can be ordered individually or as a kit with three additional free-standing panels, creating approximately a 400 sq. ft. creep feeding lot for calves. Optional upgrades include pipe-hinge creep gates and multiple opening configurations to match your herd and feeding program.

Built tough. Built simple. Built to last — right here in Oklahoma by B&S Welding & Fabrication.
